Cannon Air Force Base – BTS Contract FA873214D0017

Highlights:

- Sumaria Systems awarded subcontract to Stran IT Services total value including special projects is \$4M which is 97% of contract value. Special projects are awarded throughout the year by the customer based upon the mission.
- CPARS Evaluation completed by Cannon AFB in November 2020. Ratings in the categories of Quality, Management and Regulatory Compliance were all Very Good

Specific Task Order Problem: Cannon AFB Clinic was having issues with their T-Metrics system.

Approach: The T-Metric system was completely out of scope on the contract because it was still under warranty by the vendor. Our team redirected their efforts from BTS to assist the vendor with troubleshooting the issues and were able to determine the cause and an optimal solution.

Outcome: Our team of experienced telecommunications technicians spent 3 days working on the T-Metric system at the AFB Clinic and hospital and successfully brought the system back up and running to the satisfaction of the customer and vendor.

Stran has a unique and transparent methodology which benefits our customers. We are non-litigious and use change orders sparingly. Our scope of works captures all the requirements of each Solicitation. This often leads to a net reduction in costs for the customer over the lifetime of the contract. Additionally, you can count on a job well done.

Impact: We have the personnel, processes, and experience to perform on Inside Plant (ISP) and Outside Plant (OSP) contracts nationwide.

Other Related Past Performance Locations
